SUMMARY

Machine Learning Engineer with 5 years building and shipping production NLP systems. Owns models end to end from data curation to deployment and monitoring.

EXPERIENCE

Senior ML Engineer, Quantiva Systems, Bengaluru

2023 - Present

- Built a document classification service (BERT fine-tuned in PyTorch) serving 4M documents/month; raised macro-F1 from 0.71 to 0.89.
- Designed a retrieval-augmented generation pipeline over 12M customer documents using FAISS and a HuggingFace bi-encoder; cut support handling time 34%.
- Containerised all models with Docker and deployed behind FastAPI endpoints on AWS ECS; added drift monitoring with MLflow and Prometheus.
- Mentored two junior engineers and ran the team's code review rota.

ML Engineer, Trailhead Analytics, Pune

2021 - 2023

- Trained NER models for invoice field extraction using spaCy and PyTorch.
- Built ETL pipelines in Python and SQL over Postgres; automated with Airflow.
- Wrote pytest suites covering data validation and model regression checks.

EDUCATION

M.Tech in Computer Science, IIT Madras, 2021

B.E. in Information Science, RV College of Engineering, 2019

SKILLS

Python, PyTorch, HuggingFace Transformers, spaCy, scikit-learn, FAISS, SQL, Postgres, Docker, FastAPI, AWS (ECS, S3, Lambda), MLflow, Airflow, Git, GitHub Actions, pytest, Linux
